Contributions:

Daphne Lopez (25%):
- Set up the UI for the default itinerary screen, editing itinerary screen, and the edit event screen
- Added functionality to the default and editing itinerary screens
- Set up the launch screen
- Added a tab bar

Eddie Cazares (25%):
- Set up blank project and GitLab repository
- Set up the UI for the new trip screen

Linh Vu (25%):
- Set up all the registration UI
- Set up a simple chat screen (did not merge yet)
- Partial (incomplete) setup of Firebase auth
- Research APIs for locations (still debating between Google API and Rapid API, looking for more options)

Mariana Hermida Rojas (25%):
- Set up all the home screen UI
- Set up the functionality of the home screen
- Set up dummy data for testing its display

Deviations:
- Tab bar functionality is not fully complete - can only move between the home screen and the new trip screen, but it doesn't show up in the itinerary screen.
- Screens present modally at the moment instead of being full-sized and there are no navigation bar/back buttons.
- We weren't able to fully set up the login/sign up with Firebase so we are pushing that to the beta release.
- We realized in our planning, event creation doesn't happen until AI integration (which we planned to work on until the beta release). So, events currently can't be created/edited.
